

Dear Supplier,

PW Rzeszow would like to remind you about additional requirements per CPW-A for PWC end use parts, which amend Aerospace Material Specifications (AMS). Specification CPW100 which is invoked on PWC Customer specifications (SPD, RSI), contains a note:

CPW 100 para 10.2:

P&WC Amendments to AMS specifications (e.g. CPW-A-XXXX) are immediately invoked when written through listing on the Revision Specification Index. These Amendments are considered part of the part definition.

This implies that amendments to AMS specs invoked on the RSI are instantly applicable, binding and have higher priority than requirements of AMS specifications. PWC Revision Specification Index is available on PWR website at:

<http://www.pwrze.com/en/offer/suppliers/supplier-quality-assurance/requirements-for-suppliers/>

We would like to ask you to verify spec CPW-A for PWC end use parts (currently CPW-A-5662, CPW-A-5663 and CPW-A-5666) and guarantee that all requirements from the PWC specifications are always met. This is an important requirement therefore we hope that proactive and preventive communication will help you to avoid any nonconformity concerned with this matter.

If you find nonconformance to CPW-A standards (binding from RSI 131 released in February 2017) and being in ownership of material with AMS standards mentioned on the RSI (5662, 5663, 5666) that doesn't meet mentioned requirements please contact us providing detailed material and part data that refers to this subject using attachment No 1 to Instruction 150 (Supplier Communication) at gp.pwc.pwr.srfi@pwrze.utc.com
