

**Dear Supplier,**

PW Rzeszow would like to remind about additional requirements per PWA-S for PWA end use parts.

Specification PWA300 is invoked on each purchase order from PWA, QAD, RCC and contains a note:

**PWA 300 para 5.1.3:**

**When an AMS Specification is referenced on a drawing or in the case of subcontracted processes or raw materials on purchase order and a PWA Supplement exists, the PWA Supplement is automatically invoked with no further reference.**

It means that spec PWA-S has the higher priority than requirements of AMS specifications and it is automatically invoked if exists.

PWA Specification Revision List you may easily find on PWR supplier portal:  
<http://www.pwrze.com/en/offer/suppliers/supplier-quality-assurance/requirements-for-suppliers/>

PWR would like to ask for verification of drawing and spec PWA-S for PWA end use parts. Please make sure that all requirements from the PWA Supplement are always properly controlled and met.

This is important requirement so we hope that by preventive sharing of this information, it will help to avoid any nonconformities in this matter.
