Published by Supplier Quality Assurance Department

Dear Suppliers,

Below you will find the analysis of the reasons for rejecting FAI reports in 2020. It is a percentage list of reasons for rejecting FAI reports by P&W Rzeszów, divided into main categories: Form 1, 2 and 3, minimum required documentation and other problems, compared with data for 2019.

On the following pages there is a detailed list of the individual subcategories that make up the main categories (listed above).

Based on the statistics below, when preparing FAI reports, please pay particular attention to the following points:

- Form 3, columns no. 8 and 9 – properly transferred requirements and reported results;
- Form 2, column no. 6 (Specification Number) and related requirements – properly reported specification, revision and material form; using the current revisions of specifications for materials/processes or providing an applicable document confirming the possibility of using an outdated revision;
- Other problems - drawing properly ballooned, including all drawing notes and applicable characteristics; no discrepancies between the data reported in FAIR and attached certificates/CofC;
- Minimum required documentation – lack of a photo of the part marking and certificates for the reported materials/processes;
- Form 1 - configuration, i.e. part and drawing revision; purchase order number and supplier code given by P&W Rzeszów.
