QUALITY BULLETIN

Published by Pratt & Whitney Company in Poland

Dear Suppliers,

This Quality Bulletin is issued based on Eagle Eye for P&W suppliers to re-highlight the need for a specific diameter measurement output.

Diameters must be inspected as minimum and maximum unless the blueprint specifies AVG regardless of attribute or variable data. If using a CMM to measure diameter the output must be minimum and maximum unless the blueprint specifies AVG. It is essential that the blueprint requirements for minimum and maximum diameters be validated as conforming on all hardware being shipped to P&W regardless of measurement method and/or constraint requirements. This is and has been a fundamental requirement to verify conforming hardware. Please review PWA360, paragraphs A5.1.2.1, A5.1.3 and B2.1.

In a case of any questions please send your reply to received Bulletin email address.

SQA Group of P&W Poland Company.
